About me

My name is Cezar. I'm 22 years old CS student, IT passionate for many years, especially software engineering, developing web apps, task automation, web crawling. Currently I'm looking for internship or a full time job as a junior Python/backend developer. Every day I try to improve my hard and soft skills, build the better version of myself. I'm a huge fan of bike riding which I spend a lot of free time for.

EXPERIENCE / PROJECTS

MY OWN TEXT EDITOR

C#, WPF

Project created to learn C# and WPF. Developing this app, I've learned a lot about desktop application programming, files handling etc. There're some editor personalization features, that allows users, to change font, text and background colors etc.

INSTAPOSTS

Python, Flask, Selenium

InstaPosts is a website appication which uses my instagram photos clawler. Clawler was created to collect many photos and for ML purposes (another project I work on). This app allows user to download as Zip all photos of spectific users. Project is based on REST Api achitecture. There're some bugs and I plan to fix them ASAP.

FILE UPLOAD WEB APP

Python, Flask

It's another web application based on Flask framework. Application allows user to upload files to server with specific expiration time (e.g. 2 days), after that time, files will be deleted. User gets unique link, send to another person who download uploaded data now. In this project I've mostly focused on backend (I plan to rebuild frontend ASAP). I want to add many more features that I've designed my mind.

PERSONAL BLOG

Python, Flask, PostgreSQL

I've designed and coded my own blog website to learn basics of Flask framework and backend programming. In this project I've used architecture based on templates. That's my first project with flask and it's not working really well yet. I plan to improve admin panel and many more features.

Check all of my project on github: **github.com/cezary-kania**

Academic Background

COLLEGE- BACHELOR OF ENGINEERING

Warsaw college of Information Technology and management
10/2017 - present

Specialization: Software Engineering
Member of student research group (C# lovers)

HIGH SCHOOL

Technikum Elektroniczne nr 1 in Warsaw
09/2013 - 04/2017

Specialization: IT technician

Hard skills

- Python
- C# / .NET
- Flask
- MySQL/ PostgreSQL
- JSON / XML
- JavaScript
- HTML/CSS
- LINUX
- REST
- Selenium
- Web Crawling
- Git / Github

Soft / Personal skills

- Communication skills
- Problem solving
- Teamwork/collaboration
- Research
- Creativity
- Engilsh (B2)
